- 31295 LANG STEREOTEST® II

MADE IN SWITZERLAND

LANG STEREOTEST® represents today's standard of random dot stereo tests without the need of 3D glasses, with very high sensitivity and specificity for stereopsis. The test combines random dots and a lenticular grid surface for quick screening of binocular vision in all groups of age, including very young children. While the test card is presented at reading distance, the patient is asked about what he sees and his eye movements are being observed. Recognition of figures is only possible if the person has full global stereopsis, while patients with amblyopia and (even small angle) strabismus fail the test.

LANG STEREOTEST® I-R shows three stereo figures with disparities of 1200, 600 and 400 arcsec. LANG STEREOTEST® II and II-R has four stereo figures with disparities of 600, 400, 200 and 200 arcsec, of which one is also monocularly visible. Multilingual instructions: GB, FR, IT, ES, PT, DE, PL, NL, CZ, SE, DK available on [www.gimaitaly.com](http://www.gimaitaly.com).

Test performed at a distance of 30-40 cm, allowing evaluation of eyes cooperation in providing one single image to the brain, starting from two separately showed figures. Suitable for children from one year old and for adults in case of suspected strabismus, amblyopia or visual reduction.

Four stereo figures with disparities 200" (fish), 400" (star), 600" (tree) and ball always visible.

Gima stereoptic test contains one ball, one fish, one star, one tree. Ball visible by one eye only.

## WORTH LED LIGHT TEST

- 31289 WORTH LED LIGHT TEST - with red/green glasses

The Worth 4 dot test, is a clinical test for suppression of either the right or left eye. Suppression occurs during binocular vision, when the brain does not process the information received from either of the eyes. This is a common adaptation to strabismus, amblyopia, and aniseikonia. Battery not included, glasses included.

- Clinical grade digital blood pressure monitor for fast and reliable readings. Clinically validated to international standards BHS, ESH, AAMI. Clinically validated for patients with special conditions: hypertension, diabetes, pregnancy, pre-eclampsia, arteriosclerosis, end-stage renal disease, obesity, elderly and children > 3 years of age.
- Two measurement modes: auscultatory (manual) and oscillometric (automated). Auscultatory mode with auto-deflate (3 mmHg/sec) provides consistent patient BP measurement and allows clinicians to verify automated readings without removing the cuff. Average mode (3x readings) allows for a more objective measurement for clinicians and helps mitigate the risk of elevated readings due to white coat hypertension. Interval settings in average mode 15, 30, 45, 60 sec. It measures BP and pulse range, systolic, diastolic, heart rate and MAP.
- arrhythmia detection
  - large memory: 210 readings
  - display panel with WHO Blood Pressure Value Classification (colour coded)
- Supplied with 2.5 m air tube, 2 cuffs made with no natural rubber or latex (M and L-XL), NiMH battery pack, AC/DC adapter (EU, US, UK, Austr.). Multilingual manual (GB, FR, IT, ES, DE, RU).

## DETECTION OF ATRIAL FIBRILLATION

### MICROLIFE AFIB technology

An innovative and patented technology for the early detection of Atrial fibrillation (AF) **More than 30,000 fatal strokes can be prevented within the European Union by using Microlife AFIB Technology in primary care** The new Microlife AFIB technology allows simultaneous blood pressure measurement and AF screening.

Microlife AFIB technology detects AF with high sensitivity (97-100%) and specificity (89%) as demonstrated in several clinical studies. Nice guidelines for "Diagnosis and assessment of hypertension" recommended to use AFIB screening for routine blood pressure measurement in primary care. AF screening by using a Microlife AFIB device is highly recommended in patients that have to monitor their blood pressure while at home.

- **32881 MICROLIFE AFIB ADVANCED EASY (Home use)**
- detection of atrial fibrillation (specific heart arrhythmia) with 1 measurement - clinically tested according to the BHS - ISO - EHS protocols and for "special patients" such as Diabetics, Elderly, Obese, Hypotensive, Pregnant

Laser engraved dial

Shock resistant body

WelchAllyn®

- 32700 DURA SHOCK DS55 SILVER LINE - DS-5501-189
- Welch Allyn's DS55 sphygmomanometer incorporating shock-resistant DuraShock technology offers practical benefits compared to traditional aneroid sphygmomanometers. This is especially beneficial in busy medical environments where equipment needs to be as robust as possible. With DuraShock Technology, Welch Allyn B.P. gauges:
- remain in calibration longer than traditional aneroid B.P. gauges, providing you with more accurate readings.
  - do not need to be replaced as often as traditional aneroid B.P. gauges, giving you a lower lifetime cost.
  - have the only gauge capable of passing AAMI's shock-resistant specification of surviving a 76 cm drop onto a hard surface and remaining in calibration.

### How DuraShock technology works

In traditional aneroid sphygmomanometer design, several delicate gears and springs convert and amplify vertical movement of the pinion to rotational movement to turn the pointer. The DuraShock gear-free design uses a single helix spring to directly convert the vertical movement of the pinion to rotation of the pointer without the use of a multi-step gear arrangement. By creating a gear-free design, the Welch Allyn Durashock has fewer moving parts providing a gauge which is shock resistant and lighter than traditional gauges. Until now, a dropped sphygmomanometer required recalibration or replacement. The DuraShock can fall 76 cm onto a hard surface and still remain accurate. It is the only gauge capable of meeting the AAMI Shock Resistant specification.
